

Hunter Thompson

Solutions Engineer | APIs, Cloud Automation & AI Workflows

Brunswick, Georgia (Remote) | (571) 356-7996 | Huntertho56@gmail.com | linkedin.com/in/hunterthompson0831

SUMMARY

Solutions Engineer with hands-on experience building API integrations, SFTP workflows, AWS serverless automation, and AI-assisted support tools. Work spans requirements gathering through testing, documentation, and rollout, with a focus on reducing manual work and making systems easier for teams to use. Comfortable with Python, SQL, PowerShell, AWS Lambda, S3, API Gateway, and cross-functional technical delivery.

CORE SKILLS

- **Integration & Automation:** REST APIs, SFTP data workflows, data mapping, workflow automation, systems integration
- **Scripting & Data:** Python, SQL, PowerShell
- **Cloud:** AWS Lambda, Amazon S3, API Gateway, serverless architecture
- **AI & Automation:** Claude workflow prototyping, AI support agents, knowledge-base design, task routing, human-in-the-loop automation
- **Delivery & Analysis:** Requirements gathering, stakeholder alignment, technical documentation, testing, QA, rollout

EXPERIENCE

Applications Integration Specialist | Dec 2024 - Present

College of Coastal Georgia | Brunswick, GA

- Build and maintain API- and SFTP-based workflows connecting CRM, SIS, and campus-commerce platforms, turning department requirements into data mappings, business logic, and production workflows.
- Designed and launched an Element451 AI support agent and knowledge base spanning admissions, housing, Help Desk, Student Handbook, and application-start workflows. In its first year, it handled 7,856 conversations, including 3,976 after hours, with 117 staff handoffs (1.5%) and an estimated 1,960 hours saved.
- Led a rebuild of the post-admit checklist used across eight departments, replacing static tracking with conditions tied to live application data and aligning teams on shared data rules. Early results showed estimated increases of 18% and 22% in two downstream engagement metrics.
- Built an internal AI Policy Navigator and a Python crawler/publishing pipeline that collects public USG PolicyStat content, structures policy text and metadata, and publishes cleaner HTML sources for Copilot retrieval.
- Handle technical delivery from requirements and workflow design through configuration, testing, troubleshooting, and documentation.

Freelance Systems & Automation Consultant | Jun 2024 - Present

Self-employed | Remote

- Build workflow automation and web tools for small-business clients, replacing manual intake, tracking, and operational steps with cloud-based systems.
- Prototype Claude-based workflows for task routing and decision support, testing where automation works reliably and where a human needs to step in.
- Build serverless AWS automations with Lambda, S3, and API Gateway for request intake and backend processing.
- Meet directly with business owners to understand current workflows, define scope, and turn requirements into working technical systems.

Business Operations Intern | Nov 2022 - Apr 2023

Karate's Plumbing Inc | Jesup, GA

- Connected service-request forms to backend workflows to improve intake and processing; also supported budgeting and process-improvement work.

SELECTED PROJECTS

Policy Navigator & USG Policy Crawler (2026)

- Built a grounded internal policy assistant and Python crawler/publishing pipeline that discovers public USG PolicyStat documents, extracts structured metadata and policy content, stores crawl state in SQLite, and publishes cleaner HTML sources for AI retrieval.

Element451 AI Support Agent (2025)

- Designed and implemented the support agent and its knowledge base across admissions, housing, Help Desk, Student Handbook, and application-start workflows, coordinating content and workflow logic across multiple campus teams.

Post-Admit Checklist Modernization (2025)

- Mapped checklist conditions to live application data across eight departments and replaced manual status tracking with a rules-driven workflow shared across Admissions, Housing, Registrar, Financial Aid, Bursar, Advising, Health Center, and Academic Support.

Service Workflow Automation System, AWS (2024)

- Built a serverless workflow using S3, Lambda, and API Gateway for customer intake and backend processing, replacing manual request handling with real-time automated data flows.

EDUCATION

Georgia Institute of Technology - M.S., Computer Science (In Progress)

University of Georgia - M.B.T., Management Information Systems (2025)

College of Coastal Georgia - B.B.A., General Business (2023)

CERTIFICATIONS

AWS Certified AI Practitioner - Amazon Web Services (2026)

AWS Certified Cloud Practitioner - Amazon Web Services (2026)

Google AI Professional - Google via Coursera

RECOGNITION

College of Coastal Georgia - Innovator Award (2026)

- Recognized for identifying areas where technology could improve College processes and building solutions around those needs.

College of Coastal Georgia - Coastal Collaboration Award (2026)

- Team recognition for cross-functional work bringing Element451 to life at CCGA.
