

Hunter Thompson

Solutions Engineer | AI Implementation, Automation & Enterprise Systems

Brunswick, Georgia (Remote) | (571) 356-7996 | Huntertho56@gmail.com | linkedin.com/in/hunterthompson0831

SUMMARY

Solutions Engineer with hands-on experience implementing AI support tools, improving workflows, and connecting enterprise systems. Work spans discovery and requirements gathering through solution design, implementation, testing, and rollout, with a focus on reducing manual work and making systems easier to use. Combines higher-education delivery with small-organization consulting and independent AI prototyping through Marshline AI.

CORE SKILLS

- **AI & Automation:** AI support agents, knowledge-base design, Claude workflow prototyping, human-in-the-loop automation
- **Delivery & Analysis:** Discovery, requirements gathering, process improvement, stakeholder alignment, documentation, QA, rollout
- **Integration & Systems:** CRM/SIS workflows, REST APIs, SFTP data workflows, data mapping, systems integration
- **Scripting & Cloud:** Python, SQL, PowerShell, AWS Lambda, Amazon S3, API Gateway, serverless architecture
- **AI Quality:** Deterministic evaluation, regression testing, release gates, policy checks, failure analysis, reporting

EXPERIENCE

Applications Integration Specialist | Dec 2024 - Present

College of Coastal Georgia | Brunswick, GA

- Designed and launched Salty, an Element451 AI support agent and knowledge base spanning admissions, housing, Help Desk, Student Handbook, and application-start workflows. In its first year, it handled 7,856 conversations, including 3,976 after hours, with 117 staff handoffs (1.5%) and an estimated 1,960 hours saved.
- Led a rebuild of the post-admit checklist used across eight departments, replacing static tracking with conditions tied to live application data and aligning teams on shared data rules. Early results showed estimated increases of 18% and 22% in two downstream engagement metrics.
- Build and maintain API- and SFTP-based workflows connecting CRM, SIS, and campus-commerce platforms, turning department requirements into data mappings, business logic, and production workflows.
- Built an internal AI Policy Navigator and a Python crawler/publishing pipeline that collects public USG PolicyStat content, structures policy text and metadata, and publishes cleaner HTML sources for Copilot retrieval.
- Handle technical delivery from requirements and workflow design through configuration, testing, troubleshooting, and documentation.

Founder & Solutions Consultant — Marshline AI | Jun 2024 - Present

Brunswick, GA | Part-time

- Run a small consulting and independent R&D/prototyping practice focused on workflow improvement, cloud tools, and applied AI for small organizations.
- Work directly with business owners from discovery and process mapping through scope definition, solution design, implementation, testing, and documentation.
- Build cloud-based tools and automations for intake, tracking, and operational workflows; prototype applied AI for task routing and decision support, testing reliability and where human review is needed.

Business Operations Intern | Nov 2022 - Apr 2023

Karate's Plumbing Inc | Jesup, GA

- Connected service-request forms to backend workflows to improve intake and processing; also supported budgeting and process-improvement work.

SELECTED PROJECTS

AI Evaluation & Quality Platform — Marshline AI (2026)

- Built a browser-based platform with deterministic evaluation and scoring for repeatable checks of response quality, citations, policy compliance, and escalation behavior.
- Implemented regression testing, version comparisons, explainable failure analysis, and release gates; added governance checks, latency and cost tracking, dashboards, and exportable reports.
- Hosted the React application on GitHub Pages with synthetic demo data and local browser storage as an independent R&D project demonstrating AI quality workflows.

Policy Navigator & USG Policy Crawler — College of Coastal Georgia (2026)

- Built a grounded internal policy assistant and Python crawler/publishing pipeline that discovers public USG PolicyStat documents, extracts structured metadata and policy content, stores crawl state in SQLite, and publishes cleaner HTML sources for AI retrieval.

Element451 AI Support Agent — College of Coastal Georgia (2025)

- Designed and implemented the support agent and its knowledge base across admissions, housing, Help Desk, Student Handbook, and application-start workflows, coordinating content and workflow logic across multiple campus teams.

Post-Admit Checklist Modernization — College of Coastal Georgia (2025)

- Mapped checklist conditions to live application data across eight departments and replaced manual status tracking with a rules-driven workflow shared across Admissions, Housing, Registrar, Financial Aid, Bursar, Advising, Health Center, and Academic Support.

Service Workflow Automation System, AWS (2024)

- Built a serverless workflow using S3, Lambda, and API Gateway for customer intake and backend processing, replacing manual request handling with real-time automated data flows.

EDUCATION

Georgia Institute of Technology - M.S., Computer Science (In Progress)

University of Georgia - M.B.T., Management Information Systems (2025)

College of Coastal Georgia - B.B.A., General Business (2023)

CERTIFICATIONS

AWS Certified AI Practitioner - Amazon Web Services (2026)

AWS Certified Cloud Practitioner - Amazon Web Services (2026)

Google AI Professional - Google via Coursera

RECOGNITION

College of Coastal Georgia - Innovator Award (2026)

- Recognized for identifying areas where technology could improve College processes and building solutions around those needs.

College of Coastal Georgia - Coastal Collaboration Award (2026)

- Team recognition for cross-functional work bringing Element451 to life at CCGA.
